

NSA White is a white cement based material for fixing marble stones over the floors and walls. Since marble has low absorption, marble is fixed with neat white or grey cement. When grey cement is used, after some time black or grey specks appear over the marble's surface. This common problem affects the aesthetic beauty of expensive marble. Since cement tends to shrink, marble fixed with neat cement will detach from the surface very quickly. Neat cement mortar is applied at a thickness of 5 mm-10mm for bonding the marble and so the mortar is not evenly spreadable behind the marble, resulting in hollows spaces. Due to this water leakage may occur. To overcome this problem, **NSA White** is designed with extra bonding agents and other performance enhancing aids to boost its adhesive properties.

WHERE TO USE:

It can be use for fixing of marble on floor & walls.

HOW TO USE:

NSA White powder is to be mixed with water at a volumetric ratio of 3.5:1. Take the required quantity of water in a ghamela and mix the **NSA White** powder gradually to achieve a paste. Allow the material to stand for 5-7 minutes for the polymers to get activated. Then remix and apply the material by a notched trowel or any suitable tools.

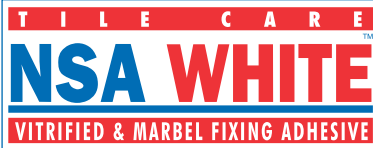

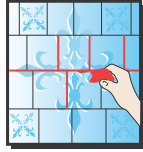

5 ADVANTAGES:

- **NSA White** is self curing material than doesn't shrink and bonding is excellent.
 - **NSA White** can be applied even at low plaster thickness 2 mm with excellent bonding properties.
 - **NSA White** stone's aesthetic beauty of color is protected with Marble Cement.
 - **NSA White** is durable and long lasting.
 - **NSA White** waterproof's the surface, it is economical in use.
- It is easy to use and gives more coverage to mark overall cost economy.

PACKING: 20 kg Sack.

SHELF LIFE:

For better result use within six months from the date of manufacturing.

STORAGE: Keep the material in a cool, dry place, since it is a cement-based material. NSA White should not be exposed to direct atmospheric conditions. A partially used bag should be stored in airtight conditions.

COVERAGE:

20 kg. of **NSA White** covers approx. 30-35 sq.ft. on smooth and even surface at 3-4mm thickness.

PRECAUTIONS:

NSA White is recommended for marble on walls & floors.

IMPORTANT NOTE: As parameters such as temperature, humidity and water addition change from site, the above instructions should be taken only as general guidelines. Performance of product depends on strict adherence to AquaProof Guidelines. AquaProof will not be responsible for failure due to improper usage/application. The coverage/yield is given for guidance only and actual field trails are recommended to ascertain the exact coverage/yield.

Manufactured & Marketed by,
AQUAPROOF GROUP
A-302, Samarth Complex, Jawahar Nagar,
Goregaon (W), Mumbai 400 062. Maharashtra.
